

Press Release

Deutsche WindGuard launches online shop

Wind measuring instruments, calibration and maintenance from one single source

Varel, 2020-09-08: With the launch of its own online shop, the leading wind tunnel specialist Deutsche WindGuard now offers customers an enhanced service regarding sensors, their calibration and maintenance. At windguard-shop.com, customers can now order these products and services conveniently online.

“Our customers are increasingly requesting to purchase the actual sensors from us, in addition to their calibration. With the new portal, we are now further simplifying this process for our customers,” says Catharina Herold, WindGuard wind tunnel services’ operational manager, under whose leadership the online shop was created. “This way, they can obtain the complete package from one single source. This significantly reduces customers’ administration efforts and delivery time as compared to purchasing from different suppliers.” In the clearly structured online shop, Deutsche WindGuard not only offers cup and sonic anemometers, propeller anemometers and wind vanes from various manufacturers, but also accessories such as adapters and cables. Bookable services include measurements, calibrations and classifications of sensors, calibrations of other devices such as static pitot tubes as well as various inspection and maintenance arrangements.

Purchasing a calibrated sensor from Deutsche WindGuard offers customers double reliability and additional quality control. The four calibration wind tunnels in Varel, which are accredited by the German Accreditation Body (DAkkS), are among the most precise in the world. In one of them, a transfer standard from the German national metrology institute (PTB) is installed. PTB uses this wind tunnel as a reference wind tunnel for its own calibration of flow sensors. Deutsche WindGuard is internationally recognized as one of the world’s most renowned service providers in the wind energy industry.
